8 Things You Need to Accept Stripe Payments Online

Want to accept credit cards online using Stripe? You'll need to have these things set up on your website.

A description of what you're selling	
Payment processors like Stripe review website to make sure they're going beyond product names to help customers really understar what they're buying, and being transparent helps with any potential disputes. Plan to include a detailed text description, photos, materials, colors, and other relevant details.	
Purchase price and currency	
Customer service contact information	
Payment processors like Stripe want to see that there's a clear way to contact you. A contact form is good. Direct communications channels like an email address or phone number are even better.	
Your store's policies for delivery, returns, refunds for goods, or cancellation for services	
For companies selling goods:	
<u>Delivery policy</u> — Describe how and where goods are shipped, and on what timeline.	
Return policy — Under what conditions can customers return something they've purchased?	
Refund policy — Describe the conditions in which customers can receive a refund.	
For companies selling subscription, services, or reservations:	
<u>Cancellation policy</u> — How and under what conditions customers can cancel subscriptions, services, or reservations.	
Any legal or export restrictions related to your business	

This is a policy that tells customers what kind of information you collect on your site (like their name, email address, etc.), how you use it, and whether you share it with any third parties. You can grab a free template for one here: https://termly.io/resources/templates/privacy-policy-template/

Some kinds of products and services are subject to laws, regulations, and other restrictions. (For example, alcohol can't be shipped to certain states.) Disclose any applicable restrictions, and how they might affect customers to make sure you're being transparent and

trustworthy.

A privacy policy for your website

Payment security information		
Your website should use HTTPS, and if you're using Stripe to pr protecting their payment data.	Your website should use HTTPS, and if you're using Stripe to process your payments, you can assure your customers that you're protecting their payment data.
